Definition 1.1. Let $\mathbb{N} := \{1, 2, 3, \dots\}$ be the set of **natural numbers**.

Theorem 1.1 (Principle of Mathematical Induction). Suppose S is a set of natural numbers, $S \subseteq \mathbb{N}$. If

1. $1 \in S$
2. $k \in S \implies k + 1 \in S, \forall k \in \mathbb{N}$

then, $S = \mathbb{N}$

Example 1.1. Show that

$$1^2 + 2^2 + \dots + n^2 = \frac{n(n+1)(2n+1)}{6} \quad \forall n \in \mathbb{N}$$

Proof. ■

2 Lecture 2 Sep. 10 2018

Theorem 2.1 (Extended Principle of Mathematical Induction). Suppose set $S \subseteq \mathbb{N}$ and let $n_0 \in \mathbb{N}$ fixed, if

1. $n_0 \in S$
2. $\forall k \geq n_0, k \in S \implies k + 1 \in S$

then $\{n_0, n_0 + 1, n_0 + 2, \dots\} \subseteq S$

Example 2.1. Show that

$$n! \geq 3^n \quad \forall n \geq 7$$

Proof. ■

Theorem 2.2 (Well-Ordering Principle). Every non-empty subset of natural number has a smallest element.

Proof. (Principle of Mathematical Induction)

Let $S \subseteq \mathbb{N}$

Suppose $1 \in S \wedge (k \in S \implies k + 1 \in S, \forall k \in \mathbb{N})$

Show: $S = \mathbb{N}$

Let $T = \mathbb{N} \setminus S$

Suppose $T \neq \emptyset$

By Well-Ordering Principle, there exists a smallest element of T , denoted as $t_0 \in \mathbb{N}$.

Since $1 \in S$, therefore $t_0 \neq 1$.

Therefore $t_0 > 2$.

Thus $t_0 - 1 \in \mathbb{N}$ and since $t_0 = \min T$, $t_0 - 1 \notin T$

Therefore $t_0 - 1 \in S$, then, $t_0 - 1 + 1 = t_0 \in S$,

Contradict the assumption that $t_0 \in T$.

Thus $T = \emptyset$ and $S = \mathbb{N}$.

■

Remark 2.1. We can use principle of Mathematical Induction to prove Well-Ordering Principle as well.
